Full-Time Part-Time / Exempt Non-Exempt

Summary

As part of the Advanced Algorithms Group, the GNSS SW Developer will deliver state-of-art Real Time Kinematic (RTK) and Precise Point Positioning (PPP) algorithms and software that are critical to all Hemisphere GNSS products.

Essential Duties and Responsibilities

- Research, develop, simulate, implement, and test innovative ideas to improve Hemisphere's RTK and PPP algorithms
- Develop complex software in C, C++, MatLab, or other selected languages in accordance with applicable software development methodology and release processes
- Test and improve code quality
- Provide reliable solutions to a variety of problems using sound problem solving techniques
- Problem investigation, root cause analysis, and corrective actions
- Work collaboratively and professionally with other associates in cross functional teams to achieve goals
- Participate in the creation of publishing material such as white papers
- Attend technical conferences on behalf of the company when necessary
- Present technical papers at conferences when necessary
- Maintain company quality standards
- Other duties as assigned
- Minimal travel required (5%)

Supervisory Responsibilities

- This position will not supervise direct reports

Education and/or Work Experience Requirements

To perform this job successfully, an individual must be able to perform each essential duty satisfactorily. The requirements listed below are representative of the knowledge, skill, and/or ability required.

Education and/or Experience

- Ph.D. or M.Sc. in Engineering, Mathematics, or related field Experience developing RTK, PPP, or related precision positioning technologies
- Experience in embedded software development
- Experience working in a team environment using a software version control system
- Experience in hands-on development and troubleshooting on embedded targets

Practical/Technical Skills

- Proven experience in embedded systems design with pre-emptive, multitasking real-time operating systems
- Familiarity with GNSS systems and concepts is required

**Computer Skills**

- Strong programming experience in C and C++ in an embedded systems context
- Experience with C# in a desktop application context is also preferred
- Proficient skill level in Microsoft Office Suite – Word, Outlook, PowerPoint and Excel
- Internet search processes and research abilities

Certificates, Licenses, Registrations

- N/A

Language Skills

- Excellent English verbal and written communication skills, including ability to effectively communicate with internal and external customers
- Ability to effectively present information to customers, clients, management, board of directors and other employees of the Company in small group situations, public groups, and/or one on one
